

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

at Oxshott, Surrey,' by W. H. Dines (*Proc. Roy. Soc.*, Vol. 77, 1906, 440-458). This work was done under a grant from the British government and from the British Association.

R. DEC. WARD.

RESEARCH LABORATORY OF PHYSICAL
CHEMISTRY OF THE MASSACHUSETTS
INSTITUTE OF TECHNOLOGY.

THE Research Laboratory of Physical Chemistry has opened with a staff consisting of seven research associates and four research assistants. The new members of the staff are Herbert T. Kalmus, M. I. T. '04, Ph.D. (Zurich), Ledyard W. Sargent, A.M. (Harvard), E. B. Spear, A.B., Manitoba, and Fred C. Mabee, A.M. (McMaster University). In addition, researches are being pursued in the laboratory by five candidates for the degree of Doctor of Philosophy and one candidate for that of Master of Science. All the members of last year's staff remain.

To one of the research workers, Mr. Richard C. Tolman, a grant of three hundred dollars has been made during the summer from the C. M. Warren Fund of the American Academy of Arts and Sciences, to enable him to construct what will probably be the most powerful centrifugal machine ever made for experimental purposes, to be used in connection with an investigation of the electromotive force produced at the two ends of a rapidly rotating solution of any ionized substance. A grant of three hundred dollars from the Rumford Fund of the American Academy has also been made to Professor A. A. Noyes, which is to be used for the construction of a calorimeter adapted to direct thermochemical measurement with solutions up to 100°.

A gift has just been made to the laboratory of a large diamond valued at three hundred and fifty dollars by the Ansonia Brass and Copper Company. This is to be used in insulating the electrode within the bomb used in the conductivity investigations at high temperatures, and will entirely eliminate the error due to contamination which has been involved in the previous work where it was necessary to use quartz insulators.

A series of twelve articles on the electrical conductivity of aqueous solutions, describing the investigations on this subject made during the last three years in the laboratory, is in process of publication by the Carnegie Institution at Washington. A large part of a revised scheme of qualitative analysis for the common elements, which has been worked out during the past year by A. A. Noyes and W. C. Bray, has just appeared in the September number of the *Technology Quarterly*.

THE PERKIN LIBRARY.

PROFESSOR CHANDLER, who presided at the Perkin Jubilee banquet in New York, made the following statement with regard to the proposed Perkin library:

In order to honor the name of our distinguished guest for all time, it is proposed by the committee of 150 chemists and other prominent citizens who have organized this jubilee celebration, to establish in New York City a complete chemical library in duplicate; one set of books to constitute a permanent reference library always available for any one who wishes to consult it at the home of the Chemists Club, and one set equally complete for circulation throughout the country among the members of the chemical profession.

It can be truly stated that there is not a complete chemical library in the United States. Several of our larger universities have fair libraries, but each one of them lacks something that the searcher is sure to want. Moreover, these libraries are not accessible to many of the chemists. There are now about 8,000 professional chemists in the United States—teachers in our universities, colleges and high schools; professional consulting chemists and chemists in manufacturing establishments, water works, experiment stations, etc. Very few of them have access to even a respectable chemical library.

It is proposed that the circulating library shall be cared for by two or more thoroughly educated chemists to whom any chemist in the United States may apply for information on any chemical subject. The chemists in charge will keep reference lists of the best books and

journal articles on every chemical subject and supply this information when called for, and if desired, send the books containing the references by express.

It is even proposed to make arrangements to have articles copied if necessary, and even to have translations made. In other words, it is hoped that with proper endowment and proper support the Perkin Library will become of the utmost value to the chemical profession. All that is necessary is the interest and cooperation of the chemical profession and some assistance from others.

SCIENTIFIC NOTES AND NEWS.

ON the occasion of the dedication of the new engineering building of the University of Pennsylvania on October 19, honorary degrees of doctor of science were conferred as follows: Alexander MacKenzie, colonel of the United States Engineers; Samuel Sheldon, professor of physics and electrical engineering in the Brooklyn Polytechnic Institute; Mansfield Merriman, professor of civil engineering in Lehigh University; Frederick P. Stearns, chief engineer of the Boston Metropolitan Water Board; Edgar Marburg, professor of civil engineering in the University of Pennsylvania; Charles Whiteside Rae, engineer in chief of the United States Navy; Henry Wilson Spangler, professor of mechanical and electrical engineering in the University of Pennsylvania; M. M. H. Vetillart, representative of the government of France at the dedication; Frederick Winslow Taylor, consulting mechanical engineer, of Philadelphia; Samuel Matthews Vaclain; John Fritz, mechanical engineer, Bethlehem, Pa., and Ramon Icarola, representative of the Mexican government.

SIR DAVID GILL, astronomer royal in South Africa, is about to retire from the active duties of the position.

THE third course of lectures on the Herter foundation at the Johns Hopkins University was delivered by Sir Almroth E. Wright, M.D., F.R.S., late professor of pathology in the Army Medical School, Netley, and pathologist to the St. Mary's Hospital, London. The sub-

ject of the lectures was 'The therapeutic inoculation of bacterial vaccines and its application in connection with bacterial disease.'

DR. W. OSLER delivered the Harveian oration at the College of Physicians, London, on the eighteenth inst.

THE seventh annual Huxley memorial lecture of the Anthropological Institute will be given on November 1, when Professor W. M. Flinders Petrie, F.R.S., will deliver an address on 'Migrations.'

THE National Health Society will hold a public meeting at University College, London, on October 29, to discuss the subject of the purity of the meat and milk supply. The chair will be taken by Sir Frederick Treves, and among the speakers announced are Sir William Broadbent and Sir James Crichton-Browne.

THE Bradshaw lecture before the Royal College of Surgeons of England will be delivered by Mr. Edmund Owen, December 12, the subject being 'Cancer: its treatment by modern methods.'

MR. F. W. LEVANDER has been nominated for president of the British Astronomical Association. The election will take place at the annual meeting on October 31.

DR. ROBERT E. COKER has resigned the Adam T. Bruce fellowship in biology in Johns Hopkins University, having been appointed by the Peruvian government to take charge of the work in connection with the marine fisheries in Peru.

MR. LOUIS J. DE MILHAU, A.B. (Harvard, '06), and Mr. John W. Hastings, A.B. (Harvard, '05), A.M. (Harvard, '06), have been appointed members of the Peabody Museum staff as ethnologists of the South American Expedition.

DR. G. C. SIMPSON, lecturer in meteorology at the University of Manchester, has been appointed assistant to the director of observatories under the Indian government.

J. B. MOWRY has been appointed commissioner of forestry in Rhode Island.

MR. J. J. DEARBORN, of the Harvard Forestry School, has been appointed assistant to
